# James Youngblood, CS 6610, Project 1

After resubmission on Jan 26, I have implemented window creation of size 1920 by 1080 with FreeGlut, terminating upon pressing the escape key, and animating the background color by cycling through colors.

My code is a single .cpp file, and uses FreeGlut along with the standard C++ library "cmath". I compiled with gcc on macOS. I expect my code to compile on most platforms. Simply compile and run the executable.
